2023-06-23

The country column in our dataset contains a more detailed information about the authors' affiliations, including first, middle, and last authors. However, this brings a level of complexity and potential confusion for machine learning models. Therefore, we propose a method to simplify the country column by retaining only the first and last author affiliations, ensuring a more straightforward representation of authorship.

```
library(stringr)
data = read.csv("INPUT_SQL_Text_Data_Astronomy_and_Astrophysics.csv")
data_CountryColumn <- data$country</pre>
#We removed all instances of middle authors' country codes. This step involved replacing the pattern "ackslash
data$country <- gsub("\\w+\\+middle", "", data$country)</pre>
data$country <- trimws(data$country)</pre>
print(head(data$country, 50))
